## Summary

As a B.Tech student specializing in Computer Science and Engineering graduating in 2028, I am eager to leverage my academic foundation and developing technical acumen. My coursework has equipped me with a strong understanding of core engineering principles and specialized knowledge within my chosen field. I am actively seeking opportunities to apply my skills and contribute to innovative projects within the tech industry. My goal is to gain practical experience and grow as a valuable member of a forward-thinking organization.

## Education

## Skills

- C Programming Language
  - Data Structures and Algorithms
  - HTML
  - Java
  - Team Leadership
- Database Management Systems
  - React.js
  - Node.js

## Projects

### CertiEngine - Online Certification Platform

Technologies: React.js, Node.js, HTML, CSS

- Developed a web-based certification platform for Java, Python, and C programming courses.
- Designed an interactive and user-friendly interface for course enrollment and certification.
- Built backend functionalities using Node.js to manage users, courses, and certification records.
- Implemented responsive design principles for seamless access across multiple devices

### Blockchain-Based Digital Credential Verification System

📅 Nov 2025 – Nov 2025

Technologies: Blockchain, Database Management, Face Verification, Thumb Verification

- Developed a blockchain-based platform for secure verification of academic and personal credentials.
- Implemented face verification and thumb verification mechanisms for user authentication.
- Reduced the possibility of fake certificates and document forgery through decentralized validation.
- Improved transparency, security, and trust in credential management systems

## Achievements

Github Copilot Certified

Microsoft Applied Skills Certified

Oracel Java Certificate

Solved 500+ difficulty-rated programming problems on CodeChef

Google Cloud - Introduction to Generative AI Studio

Active Problem Solver on Unstop
